Portfolio: <https://asaniyan-portfolio.vercel.app/>

GitHub Profile: <https://github.com/ASANIYAN/>

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of professional experience building and shipping production web applications using React, Next.js, TypeScript, Node.js, NestJS, and PostgreSQL. Experienced in owning features end-to-end, from database schema design and backend APIs to responsive frontend interfaces and deployment. Passionate about building scalable products, shipping quickly, and delivering clean, maintainable software in fast-paced engineering teams.

SKILLS

Frontend: HTML5, CSS3, React, Next.js, TypeScript, JavaScript, Tailwind CSS, React Router, TanStack Query, Zustand, Redux, Responsive Design, Accessibility (WCAG), Cross-browser Compatibility, Design Systems

Backend: Node.js, Express.js, NestJS, Fastify, REST APIs Development, Third-party API Integration, Payment Integration, Authentication (JWT, Session Management),

Databases: PostgreSQL, MongoDB, Redis, Database Design, Schema Design, Indexing, Query Optimisation

Real-Time & Systems: WebSockets, Redis, Background Jobs, Distributed Systems, Event-driven Architecture, Real-Time Synchronisation

Testing & Quality: Jest, Vitest, React Testing Library, Playwright, Puppeteer

Tools & Infrastructure: Git, GitHub, GitHub Actions, Docker, CI/CD, Vercel, Render, Vite, Webpack, Babel, npm, yarn, Figma

Engineering: System Design, Component Architecture, REST API Design, JWT Authentication, Authorisation, Secure API Development, Session Management, Performance Optimisation, Debugging, Code Reviews, Feature Ownership, Agile (Scrum), Asynchronous Programming, Scalable Application Architecture

PROFESSIONAL EXPERIENCE

Software Engineer, Sharperly — Remote *June 2024 – May 2026*

- Built and maintained production React applications supporting customers' onboarding, payments, authentication, KYC, and financial workflows.
- Integrated frontend applications with secure REST APIs supporting payment processing, authentication, notifications, and third-party services.
- Diagnosed, debugged, and resolved production issues across customer-facing financial systems, improving application stability and reliability.
- Worked closely with product managers and designers to deliver customer-facing features.

Frontend Engineer, Hecord — Remote *December 2023 – June 2024*

- Built pixel-accurate responsive React interfaces from Figma designs for patient records, prescriptions, billing, inventory management, and analytics dashboards using reusable UI components.
- Achieved WCAG 2.1 AA compliance across the platform, reducing accessibility audit findings by an estimated 25–35%.
- Implemented performance optimisations that reduced load times by approximately 40% for users on constrained network connections.

Frontend Engineer, AuditBar — Remote *January 2023 – December 2023*

- Built responsive customer-facing React applications using reusable components and scalable frontend architecture.
- Documented API integrations, implementation decisions, and technical solutions to improve engineering collaboration.
- Designed workflow automation features that reduced manual administrative effort while improving operational efficiency.

PROJECTS

Meridian — React • TypeScript • Node.js • NestJS • PostgreSQL • Redis • WebSockets • Jest

- Designed and built a full-stack collaborative platform from frontend interfaces through backend architecture, database design, authentication, and deployment.
- Implemented real-time collaboration using WebSockets and Redis to synchronise application state across multiple connected users.
- Designed scalable REST APIs, authentication, and PostgreSQL persistence supporting concurrent editing and reliable data consistency.
- Applied distributed systems principles to build a maintainable and scalable real-time application architecture.

Ligature — React • TypeScript • NestJS • PostgreSQL • WebSockets • Vitest

- Designed and built a full-stack multiplayer Scrabble platform from database schema and backend APIs to responsive React interfaces and deployment.
- Implemented authoritative server-side game logic, PostgreSQL persistence, and WebSocket-based real-time gameplay synchronisation.
- Built a reusable TypeScript game engine implementing official Scrabble rules, scoring, dictionary validation, and turn management.
- Architected the application as a pnpm monorepo with separate engine, server, and client packages for scalability and maintainability.

Payment Gateway — Node.js • TypeScript • PostgreSQL

- Designed PostgreSQL schemas and backend services modelling the complete payment transaction lifecycle.
- Built secure REST APIs supporting payment initiation, processing, reconciliation, and transaction tracking.
- Enforced transaction integrity through database constraints and application-level validation.

EDUCATION

B.Tech. Computer Science - Federal University of Technology, Akure, Ondo State | 01/2018 - 04/2024
