GitHub Profile: <https://github.com/ASANIYAN/>

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building scalable web applications using React, TypeScript, Node.js, Express.js, and PostgreSQL. Experienced in designing and implementing RESTful APIs, transaction workflows, authentication systems, third-party integrations, and production-ready software. Comfortable solving engineering problems involving data integrity, system reliability, and performance while collaborating across product, design, and engineering teams.

SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, React Router, TanStack Query, Zustand

Backend: Node.js, Express.js, NestJS, Fastify, REST API Development, Third-party API Integration, Payment Gateway Integration, Authentication (JWT, Session Management)

Databases: PostgreSQL, MongoDB, Redis

Real-Time & Systems: WebSockets, Real-Time Systems, Cron Jobs

Testing & Quality: Jest, Vitest, React Testing Library, Puppeteer

Tools & Infrastructure: Git, GitHub, Vite, Webpack, Babel, Yarn, npm, Figma, Docker, GitHub Actions

Engineering: Component Architecture, Design Systems, Distributed Systems, Web Security Best Practices, State Management, Responsive Design, Accessibility (WCAG), Performance Optimisation, Debugging, Code Reviews, Agile (Scrum)

PROFESSIONAL EXPERIENCE

Software Engineer, Sharperly — Remote *June 2024 – May 2026*

- Resolved production issues across customer-facing applications, improving platform stability and reducing disruption to core user workflows.
- Developed and maintained customer-facing financial workflows, including authentication, KYC, transaction management, and payment-related user journeys while collaborating across product, design, and backend engineering teams.
- Contributed to code reviews that improved code quality, maintainability, and consistency across the engineering team.
- Developed clean, well-documented, and maintainable code that enabled faster feature iteration and simplified long-term maintenance.

Frontend Engineer, Hecord — Remote *December 2023 – June 2024*

- Built responsive React interfaces for patient records, prescriptions, billing, inventory, and operational analytics by integrating REST APIs with reusable frontend components.
- Achieved WCAG 2.1 AA compliance across the platform, reducing accessibility audit findings by an estimated 25–35%.
- Implemented performance optimisations that reduced load times by approximately 40% for users on constrained network connections.

Frontend Engineer, AuditBar — Remote *January 2023 – December 2023*

- Built a mobile-optimised customer platform that drove a 3x increase in inbound client sales opportunities.
- Implemented cross-browser compatibility features to ensure a seamless user experience across major browsers and participated in code reviews to maintain high code quality and support continuous integration.
- Designed an automated invoicing workflow that reduced manual administrative effort by an estimated 18%.

PROJECTS

Meridian — React • TypeScript • Node.js • PostgreSQL • WebSockets • Jest

- Built a collaborative document editor to explore the engineering challenges of real-time collaboration, implementing live multi-user editing with WebSockets and conflict-free synchronisation to avoid overwriting.
- Designed and implemented the complete system, including frontend architecture, RESTful backend services, persistence, and automated testing, to better understand distributed application design.

Payment Gateway — Node.js • TypeScript • PostgreSQL

- Designed a payment processing system that modelled the complete transaction lifecycle using explicit state transitions to preserve transaction integrity and ensure reliable payment processing.
- Enforced transaction integrity through both application-level validation and PostgreSQL database constraints, preventing invalid or impossible payment state transitions.
- Implemented structured audit logging to provide a complete history of payment events for traceability, debugging, and reconciliation.
- Built RESTful APIs for payment initiation, processing, and status tracking, ensuring transactional consistency during concurrent payment processing.

MagikInterior — React • TypeScript • TanStack Query • Express.js • PostgreSQL • Replicate API

- Built an AI-powered interior design platform, transforming a multi-step image generation process into a guided workflow that made AI-generated design previews easy to use.
- Designed interfaces for AI image generation, history management, and subscription workflows while integrating Express.js REST APIs, the Replicate API, and Stripe payment processing.

EDUCATION

B.Tech. Computer Science - Federal University of Technology, Akure, Ondo State | 01/2018 - 04/2024
